Definitions & Pro Tips

Normal folder

- De-clutter by using “normal folders” to group similar folders together (i.e. instead of having 20 event project folders and 15 product project folders, create an “Events” folder and a “Product” folder.

Resource folder

- If the new file we’re adding is applicable to the entire Area, add it to the Resource folder (e.g. a “Trip Ideas spreadsheet” should live under the “01 Travel | Resources” folder, which in turn is nested within the “Travel” Area folder

At the end of the day, don’t forget that the best system is the one that you can consistently stick to. Follow the PARA method as much as is beneficial for you and don’t feel like you should be “100% perfect” right away!

I promise you practice makes perfect and you’ll soon have a neat and tidy Google Drive!
